Images/Posts**

High Engagement Images/Posts

It is very important to have high levels of engagement on your social media posts in order to maximise your outreach. The below images are great to use as posts to “fill in the gaps” and drive engagement to your social pages. Feel free to use the images in this guide for your social posts and also have a look around at other pages and on google images to find more examples.

Although these posts and images don't directly drive customer orders, they improve your reach and following which will benefit you going forward. A higher social media following means that when you have a new announcement or offer it will reach larger numbers of potential customers.

Posts that generate engagement are much better for improving your audience and customer base than just constantly posting offers and news about you. You want to have valuable and interesting content that encourages conversation and sharing.

Do you cut your sandwich diagonally or in half?

Do you fold the pizza slice or not?
